Top Pacific Service Provider Deploys Certes Networks to secure Banking Customer's Data

Infinetworks selects Certes Networks' TrustNet encryption solution to meet financial sector customer's security and performance requirements

Pittsburgh, PA, September 19, 2012 Certes Networks, an innovative developer of scalable network and cloud encryption solutions, today announced that Infinetworks (PT Infinetworks Global) has deployed Certes Networks' Advanced IPsec VPN solution to secure data over their Layer 2 Wide Area Network (WAN) connections between their Data Centers and Disaster Recovery sites, which serve their customers in the banking and financial markets.

Infinetworks is a value-driven company serving the financial and telecommunication sectors throughout Indonesia and the Pacific Rim, and banking clients of Infinetworks have been ranked by SWA Magazine (July 2012) as providing the best Internet Banking and Mobile Banking services. Given the sensitive nature of their customer's data Infinetworks secures all of their customer's traffic, not only encrypting the data, but also providing cryptographic isolation between customers.

"Our customers in the banking industry have a heightened need for security, but are not willing to compromise on network performance or availability" said Constantin Papadimitriou, CEO of Infinetworks. "The tunnel-less encryption capability that Certes Networks provides allows us to offer the highest level of security without impacting the performance of our network or our ability to monitor service level agreement compliance. Itâ€™s an ideal security offering for a service provider."

Certes Networks provided Infinetworks with a Layer 3 encryption solution that is transparent to the network and also performs persistent authentication to ensure both data privacy and integrity. The solution's enterprise grade key management provides Infinetworks with the ability to easily manage the security of all of their banking and financial customers. These features, exclusive to the Certes Networks solution, allow Infinetworks to meet both their security and performance commitments and make future expansion easy to manage.

About Certes Networks
Certes Networks protects data in motion. The company provides advanced data protection solutions for both physical and virtual networks that enable secure connectivity over any infrastructure without compromising performance or availability. Customers rely on Certes Networks to protect data, decrease risk and reduce the cost of compliance by enabling secure connectivity to critical infrastructures. Certes Networks has been recognized by Gartner as a Cool Vendor in Cloud Security in 2012. Learn more about Certes Networks by visiting www.CertesNetworks.com.
